

Thames Water Trip

Max

15/10/2019

When we first arrived, we were seated in the education room where Greg spoke to us about what we would see on the tour and facts about water usage. ✓

In the picture of me, you can see that I am pumping, what you don't see is what I am actually pumping it was a machine that showed us that when oxygen is pumped into water, anything, including people, will sink to the bottom. The air pressure pulls you down. ✓

We also did an experiment where we mixed warm water with some sort of yeast, put a balloon over the top and waited for the gas to collect. Unfortunately, the experiment was unsuccessful and our balloon didn't visibly collect any gas. ✓
